Our Story

Built with Integrity

Welcome to Integrity Dental Services, our company was founded in 2019 with the idea that like minds tend to work very well together. As a company, we believe that the restorations we provide to patients are of the utmost quality. All of our restorations are made in the United States.

Backed with Talent

Our employees are our life-blood. We challenge and push them but also provide the latest technology, tools and education. This is how we continue to produce amazing quality solutions for our customers and their patients. Our employees have been featured in publications and recognized for their talent.

With 10 CDT's and 2 MDT's on our Integrity team, we can deliver premium quality, highly consistent Dental restorations. We have a vast well of diverse talent that works with our customers daily; from simple single-unit crowns to very complex full mouth treatment plans, we are here to advise you and your team at every step. Our talent pool is not only limited to people; we have some of the most capable milling machines, scanners, and 3D printers available in the dental market. Combine these two talented groups, and we deliver success daily.

Integrity Dental Services, a dental laboratory where communication is the cornerstone of our business.

We take pride in the work we produce, and we proudly make it in the USA with the highest quality materials available. We have assembled a team of true professionals that understand these values and love what they do. USA-made products and our team of professionals are the recipe for our success. This is what Integrity Dental Services is all about. Quality is so much more than a product; it is a philosophy that starts with communication. We are excellent listeners, and we are excellent at truly understanding the needs of our customers. We build relationships, not account numbers, and you won't find an automated phone tree answering your call.

In September 2019, Integrity Dental Services opened its doors. In less than two years we have grown from 3 employees to over 100. From 3 locations, we provide our products to customers in over 35 states around this great country. Frankly, we get it.

Integrity Dental Services is a dynamic, forward-thinking, cutting-edge, and problem-solving dental Laboratory company, and it all starts with communication.

Implants and Full Arch

Full Arch Zirconia

We use only premium Zirconia discs that are supplied from Zubler USA. Each Zirconia disks is 1200 MPa for the most durable restoration for our dentists and patients. The Zirconia we use has a translucent appearance that provides patients with a more natural match to your existing teeth.

Milled Titanium Bar

We use medical-grade Type 5 Eli titanium for its CAD/CAM milled titanium bars. A titanium bar is fabricated for an implant-supported prosthesis. Usually, the bar is wrapped in resin and teeth to achieve a hybrid restoration.

Milled PMMA

We use only premium PMMA discs that are supplied from Zubler USA. Each PMMA disc offers 150 MPa for the most durable restorations for our dentists and patients. PMMA (polymethylmethacrylate) is a synthetic resin characterized by its strength, high density, and excellent resistance to abrasion.

Implant Supported Bridge

We offer multiple different types of implant crowns. An implant-supported crown is a dental prosthesis that replaces a missing tooth by inserting an artificial titanium root (dental implant) and attaching an artificial tooth to the dental implant. Usually, the crown can be either cemented or screw-retained. Either titanium or zirconia abutment.

Removable Restorations

Premium Dentures

Starting with only the highest grade materials and combining them with some of the most talented denture technicians in the world. Our removable team creates amazing products with the highest esthetic results.

Economy Dentures

Always mindful of our the patient's needs, our economy dentures provide a precision fit combined with comfort and functionality. These products can be produced traditionally or utilizing our 3D workflow.

Partial Dentures

We offer a full line of partial denture products. Flexible partials, cast partials, as well as acrylic partials. Integrity only utilizes the highest level of materials to fabricate these appliances.

Fixed Solutions

Full Contour Zirconia

We offer full contour zirconia. In our unique digital process we utilize the highest quality, strongest and most esthetic zirconias available in the market today with 3 layered zirconia discs. Our unique milling strategies allow this material to replicate very natural restorations.

3D Zirconia Elite

This product allows for extreme esthetics in the anterior region without the loss of strength. Utilizing specialty zirconia discs with 9 layers of translucency. This allows for a beautiful restoration.

PFZ Layered

By utilizing our premium zirconia core material and adding the talents of our highly trained ceramists. We are able to match even the most challenging of esthetic cases by hand layering the zirconia for a custom and natural result.

e.max

We offer the tried and tested e.max material that has provided amazing monolithic results for many years. Our premium milling and pressing techniques are able to derive amazing marginal integrity.

Additional Services

Night-guards

We offer multiple types of nightguards including hard, soft hard-soft, and splints. These can be manufactured completely traditionally all the way to completely digitally. Our digital processes allow for fast, efficient, and comfortable solutions for your patients.

3D Printing

This technology allows us to produce a wide variety of accurate and safe products, including economy dentures, nightguards and models.

Chairside Conversion

We provide the patient with an immediate denture after surgery, our technicians can be available the day of surgery to produce an on-site solution for the patient to leave with a removable appliance right then. We provide the patient an immediate denture the day of surgery.

Chairside Assistance

Our staff is available either virtually or in-person where possible to consult, plan, and assist with more complex cases and show guidance to new staff with proper techniques. We are also able to provide custom solutions with our wide range of manufactured technology in our labs.
